

FYPals

Phase # 3

Team # 6

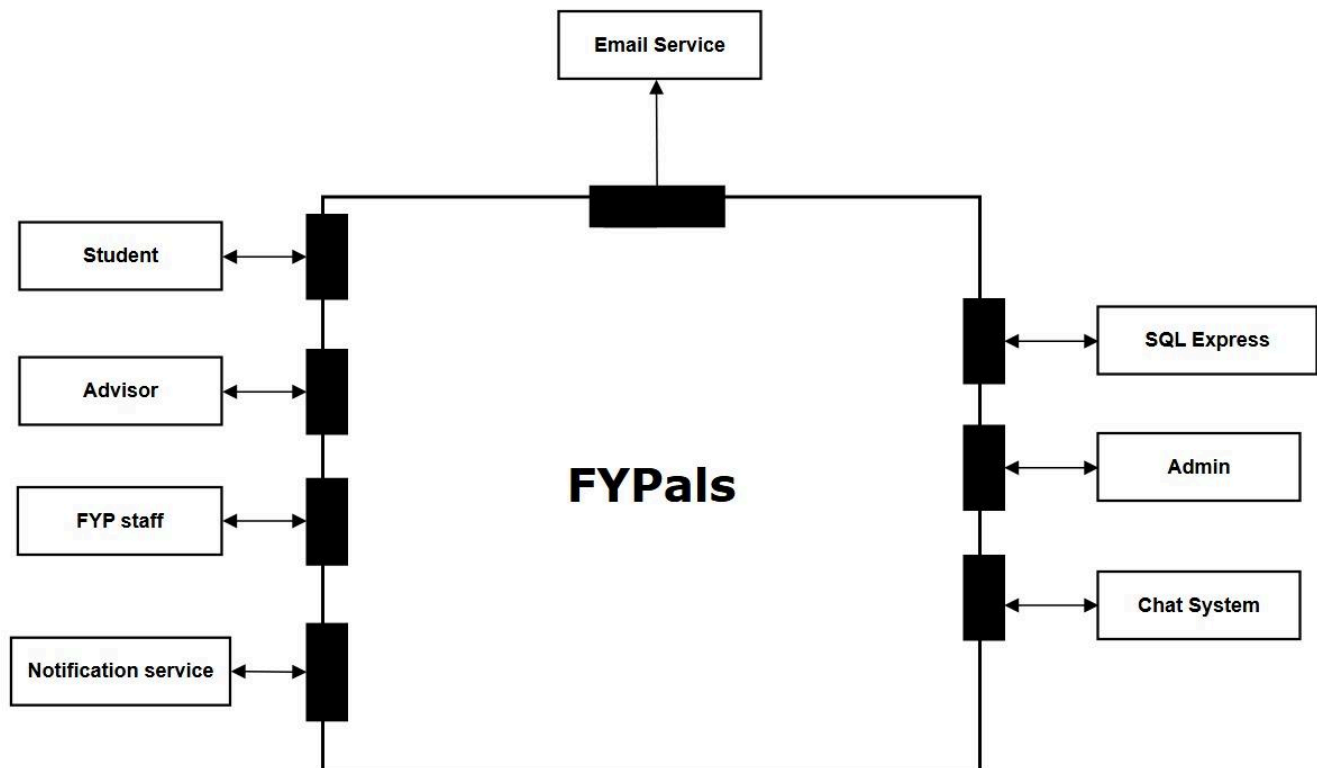

Member Name	Member Roll #	Primary Responsibility
Ahmad Ali Khan	24L-3049	Admin (Backend + Frontend)
Adina Saqib	24L-3003	Post,Notification , Team Chat (Backend + Frontend)
Zuhr Faisal	24L-3068	FYP Staff Panel (Backend + Frontend)
Hamna Faisal	24L-2551	Testing and Debugging (Admin + FYP Staff)
Bilal Kashif	24L-3036	Team Overview , Chat Progress (Backend + Frontend)
Manumha Nadeem	24L-3097	Testing and Debugging (Student + Advisor)

3. Description

Sr#	Component Name	Component Description	Requirement Reference
1	FYPals Server	The central server that processes all client requests and manages communication between all actors in the system. Handles business logic, enforces role-based access control, and serves responses back to Students, Advisors, FYP Staff, and Admin.	UC-1a to UC-9, NFR-F1.1, NFR-F2.1, NFR-F3.1, NFR-F5.1
2	Student	A registered FYP student who can form or join teams, create and vote on posts, send chat messages, track project progress, submit deliverables, and raise disputes. Students assume different permissions based on whether they are Team Leader or Team Member within a project.	UC-1a, UC-1b, UC-1c, UC-1d, UC-2a, UC-2b, UC-2c, UC-3, UC-4a, UC-4b, UC-4c, UC-5, UC-6a, UC-6b, UC-7, UC-8a
3	Advisor	A FYP Advisor who supervises assigned teams. Responsible for reviewing and providing feedback on deliverables, approving or requesting changes, monitoring project progress, and communicating with teams via chat.	UC-1c, UC-2a, UC-2b, UC-2c, UC-3, UC-4a, UC-5, UC-6a, UC-6b, UC-8b, UC-8c

4	FYP Staff	FYP Office Staff who oversee platform activity. Can view submitted deliverables and leave comments but cannot approve them. Also able to search the platform and manage their own profile.	UC-2b, UC-2c, UC-5, UC-6a, UC-6b, UC-8b
5	Admin	System administrator responsible for managing all platform records including users, posts, teams, and projects. Can delete users, remove posts, search database records, and send warning emails.	UC-9

4. Rationale

The Client-Server Architecture was chosen for FYPals because the system is a web-based application, where Client-Server is the standard model, with core functionalities such as team formation, post creation, voting, progress tracking, deliverable review, dispute resolution, and deadline reminders all revolving around a centralized server that enforces role-based access. By using a central server as the authoritative component, all clients (Students, Advisors, FYP Staff, Admin) can efficiently store, retrieve, and update consistent data without direct coupling between clients. This architecture supports scalability, maintainability, and real-time communication, making it ideal for simplifying FYP collaboration, generating project progress statistics, and automating deadline reminders based on deliverable due dates.
